2nd Year B. Tech Student |Artificial intelligence|Learning & Building|
No-Code developer |Building AI Automations | AI Agents & Voice
Agents | Gen AI | n8n • Open AI • Claude • Gemini | Agentic AI
Hyderabad, Telangana, India

Summary

Hey there!

I'm a 2nd-year B. Tech student at MLR Institute of Technology, Hyderabad, on a mission to explore the cutting edge of AI and automation. I don't just write code—I build intelligent systems that work while you sleep.

What I Do

I specialize in creating AI automations, workflows, and autonomous agents that solve real-world problems without traditional coding. My playground? Platforms like n8n, Make, and Open AI.

Projects :

AI Voice Agents for automated sales conversations

Custom GPTs

Cold DM Copywriting AI Agents

Telegram Chatbots for seamless user engagement

Human AI Avatars using Tavus for personalized interactions

My Approach

I believe the future belongs to builders who can ship fast and think creative. That's why I participate in hackathons where I build functional websites and AI solutions without typing a single line of traditional code—proving that the best solutions come from understanding problems, not just syntax.

What I'm Building Right Now

Scaling my portfolio with multiple AI automation projects and workflows

Launching into content creation to share my AI journey

Actively seeking Summer 2026 internships in Gen AI, Agentic AI, AI Automation, or AI Product Development roles

Where I'm Headed

2026: Master agentic AI systems and build a strong professional network

2028+: Launch my own AI automation agency post-graduation, helping businesses transform their operations with intelligent systems

Let's Connect!

I'm passionate about connecting with AI engineers, content creators, and start up founders in Hyderabad and beyond. If you're building something exciting in the AI space or want to collaborate on automation projects, let's talk!

I communicate in English and Telugu—always happy to chat about AI, automation, no-code solutions, or the next big idea.

Currently open to: Freelance projects | Collaboration opportunities | Internship roles in AI/Automation

Core Expertise

Generative AI • AI Automation • Workflow Automation • AI Voice Agents • AI Agents Development • prompt Engineering • No-Code Development • Prompt Engineering • n8n • Make • Open AI API • Agentic AI
